

Leading global manufacturer of innovative drive technology
Travel around the world and start directly from your home office!

Global service professional for intelligent drive systems

We are an internationally active group of companies with over 2,200 employees and one of the world's leading manufacturers of special gears, drive elements and test systems. Our high product quality and flexibility in responding to customer requests are among our outstanding strengths. Due to our strong growth, we are currently looking for a service professional or a broad-based technician and experienced expert who wants to develop further and is willing to travel extensively.

After undergoing intensive training at the main factory in southern Germany, you will assume worldwide service assignments. You will carry out installations, commissioning, maintenance and repairs of special gear units. In addition, error analysis during troubleshooting and the requisite documentation thereof belong to your tasks. You will be generally supported in your work by customer employees who will guide and instruct you professionally. Your base is your home office, therefore a move is not necessary. By regularly attending training courses and specialised advanced training courses, we keep you up-to-date with our innovations.

After successful completion of your vocational training as an industrial mechanic, mechatronics technician, or electrician (possibly as a master craftsman or technician) you have gained practical experience in service. With your high technical understanding, you will be in a position to record the functions of the very different drive systems and carry out any service tasks independently. You are flexible and ready to travel globally. You are eager to discover the world, and you also enjoy dealing with people from different cultures. With your pragmatic, hands-on character, your assertiveness and your friendly, service-oriented demeanour, you will be our “face” to the customer.

- Implementation of worldwide service operations
- Installation, commissioning and repair of special drives
- Start of assignment from home office
- Manage and coordination of customer employees
- Regular advanced training

- Mechanic, electrician, mechatronics technician, master craftsman or technician, if applicable
- Willingness to travel
- High flexibility
- Good command of English
- Customer-oriented demeanour

If you are interested in this challenging and varied task and are looking for exceptionally good development opportunities in an international environment, then we look forward to getting to know you! We offer you an innovative, financially strong company with a respectful and team-oriented culture as well as an excellent compensation package. Please send your complete application documents by email stating the reference number **AS312H** to the personnel consultancy vietenplus commissioned by us, attn. Mr Schneider, bewerbung@vietenplus.de. Ms Richter and Ms Fischer will be happy to answer any of your initial questions by telephone on +49 (0)4102-66725-0. **Confidentiality is guaranteed.**
